Dear Efima,

My name is Adam Kuhn and I am a Front-end Web Developer looking to begin my career in the Tampere tech industry. I studied web development at Enspiral Dev Academy (EDA). At EDA I learned full stack web development with JavaScript, and have personally become proficient with such technologies as React, Redux, Node.js, Express PostgreSQL, MongoDB, and Jest to name a few. I have also recently begun to take the dive into the mobile world and have been learning React Native during my free time. While I have not yet taken the the dive into learning Angular, TypeScript, or VUE, they are on my list to tackle in the future.

I was drawn to Efima because I want to join a company that truly makes an impact on the world. Being part of a team that produces meaningful work is important to me because meaningful work is what makes a job more than "just a job". Efima's Dooap is a product that makes a difference in the lives of the people who use it, and that is something I want to be a part of.

Communication, honesty, and trust are important values to me and I am looking for a role in a company that shares these ideals. These values are important to me, because when colleagues are able to trust each other and communicate ideas clearly, there becomes a great sense of teamwork as the group strives to achieve a common goal. I thoroughly enjoy working with others and being a part of a supportive team that truly works together is important to me. And from the research I've done on Efima it is apparent that Efima also values communication, trust, and honesty, which makes my interest in joining your team even greater!

Personally, I am a very determined, hardworking individual, who loves a challenge. This partly explains why I've fallen in love with programming. The ability to learn and try new things is endless. There is always a new technology to learn or a challenge to overcome. It is the learning, growing, and puzzle solving that makes development so enjoyable for me. Programming is like a superpower that allows for the creation of something from nothing. And I love that! I love being able to build solutions for people no matter how big or small. The ability to create something that can solve someone's problem or make their day easier is truly amazing. The joy I get out of puzzle solving and overcoming challenges while writing code, combined with the ability to make an impact in someone's life is why I love being a developer and can't wait to join the workforce.

Cheers,  
Adam Kuhn
